

Implement information protection and data loss prevention by using Microsoft Purview

content

Module 1: Create and Manage Sensitive Information Types

- Differentiate between built-in and custom sensitivity labels.
- Configure sensitive information types using exact data match-based classification.
- Implement document fingerprinting for data identification.
- Create and manage custom keyword dictionaries for enhanced data protection.

Module 2: Create and Configure Sensitivity Labels with Microsoft Purview

- Understand Microsoft Purview sensitivity labels in the context of Microsoft 365.
- Create, publish, and manage sensitivity labels to classify and protect data.
- Configure encryption settings for sensitivity labels to enhance data security.
- Implement auto-labeling to ensure consistent data classification and protection.
- Utilize the Microsoft Purview data classification dashboard to monitor and manage sensitivity label usage.

Module 3: Prevent Data Loss in Microsoft Purview

- Explore the benefits and features of the data loss prevention (DLP) solution.
- Understand the configuration process for DLP policies.
- Describe the user experience when DLP policies are applied.

Module 4: Implement Information Protection and Data Loss Prevention with Microsoft Purview

- Create and configure sensitive information types and sensitivity labels.
- Apply auto-labeling policies to automate data protection.
- Enforce DLP policies to prevent unauthorized data access and loss.
